## ION-R™

...makes you think, doesn't it?

**TIMESCO**  
INSTRUMENTS FOR LIFE

# ION-R LITHIUM RECHARGABLE ENGINE

## A recharger system that grows with you one click at a time...

An innovative, intelligent lithium recharger for use with all Timesco rechargeable engines.

The colour changing LED indicates the health of the battery and the charging cycle.

Both sides of the recharger have end panels that can be quickly removed to expose the unique connector plates. These connector plates allow up to 4 chargers to be daisy chained together delivering power through all chargers equally yet using only one transformer.

Up to 4 charging ports on one charger and one plug socket.

The LED on the charger will initially glow yellow to indicate that it is testing the state of charge and the health of the engine. After a short while, if the engine requires charging, the LED will flash green. When the engine is fully charged the LED will turn to a solid green. If the battery within the engine is faulty the LED will flash red to indicate that the battery should be disposed of or returned to Timesco for attention.

Once engines are fully charged the recharger will go in to a low power state to avoid draining any unnecessary electricity, truly energy efficient.

## Full Compatibility

To compliment the ION R charger, we have also developed two Lithium ION batteries that are fully compatible with this new charger and can be used in our existing metal laryngoscope handles; Xenon, XLED, Orion, and in our Orion diagnostic handles.

Available in medium C size and small AA size.

Insert adaptors are required to use these batteries with the ION R Recharger.
