SINGLE USE SKIN HANDLE

Real protection from cross infection from a truly low cost laryngoscope handle...

The Timesco Single Use Skin (SUS) is a unique laryngoscope handle designed to be compatible with all Timesco EES Engines. Works with Shakerscope, ION and ION R engines.

The World's only fully enclosed single use handle to work with kinetic, dry cell and rechargeable options.

The engine is fully enclosed and protected within the handle. With no moving parts the engine is totally sealed to eliminate fitting issues and maintenance and is a very low cost solution. The secure fit end cap protects the engines from cross infection.

The head is internally keyed to accept all engines; Shakerscope, ION and ION R.

The lens for the LED in the engine is built into the one piece handle design so the handle provides a completely sealed environment for the engine, protecting it from any possible contamination.

Unique on/off button instead of the traditional "push down" collar, avoids inconsistent fitting of handles and blades and light loss from worn, sticking or poor fitting collars. The button is elongated to prevent light flare from the LED.

A rigid metal bar provides secure fitting for ISO 7376 compatible laryngoscope blades. The handle is extremely strong and will not break under normal use.

Clear, transparent design, which is clearly marked 'Single Use', allows visualisation of the engine inside to see if it is kinetic, dry cell or rechargeable and to identify the relevant instructions for use.

Compatible with all Timesco EES Engines: Shakerscope, ION and ION R engines.

The Single Use Skins are supplied in boxes of 25, in easy-tear polythene pouches.
